

Announcement of 2013 EPV seminar / webinar : “Samples collection & testing in NHP” 28-29th November 2013- DPZ Gottingen Germany

I am delighted to announce the general plan for our 2013 EPV seminar.

This will be an interesting and practical seminar which might help us in our routine work , It will be for the first time a combination of Seminar and Webinar - On top of the normal presentations in the room we will have some speakers from the US and remote countries giving some of the presentations via web connection and they will also answer questions from the audience.

We publish the seminar subjects now so you have enough time to collect data, take video clips and prepare a great practical presentation with clear explanations and instructions.

Please book the 28 and 29 of November 2013 with arrival to DPZ on 27th afternoon as we will start on 28th early morning.

The plan is to have 2 full days, the first will focus on the published subject and the second will be on case reports, regulations, problems and administration .

We will have a nice social program with 2 dinners and a speech of our 1st honorary awarded member and maybe a visit to the center to the one who have not done it in the past.

Below you can see the seminar subjects :

Samples collection & testing in NHP - Practical EPV 2013 seminar / webinar
